Barton-Malow General Contractors/ Construction Managers Handling A Variety of Multi-Million Dollar Projects

An aerial view of the three-and-one-half million square foot automobile assembly plant being constructed by Barton-Malow in Detroit, Michigan. The budget for the plant is estimated at \$600 million.

*A \$600 million auto assembly plant
is under construction
with the help of ARTEMIS...*

The Michigan based Barton-Malow Company is one of the fastest growing program construction management, and general contracting firms in the United States. Since June of '82, ARTEMIS has been the project management tool for all of Barton-Malow's major program management, construction management, and general contracting efforts.

Currently ongoing is the construction of a three-and-one-half million square foot automobile plant in Detroit, Michigan. The project is unique in that it is one of the most complex auto assembly plants under construction with a degree of robotics being implemented unequalled by any other plant in the U.S. The budget for the Detroit plant has been estimated at \$600 million.

Clancy Day, for Barton-Malow, provided more information about the company and the type of projects typically undertaken. "We have four divisions at Barton-Malow," he said "Industrial, Commercial/Institutional, Health Facilities, and Special Projects."

The Industrial Group is handling the program and construction management of the Detroit
